108 West Cherbourg Dr, Cheektowaga, NY | +1 716-444-9433 | davidckreuter@gmail.com

Dear Hiring Manager,

As a Senior Infrastructure and Networking Engineer with over a decade of experience, I have built my career at the intersection of high-performance networking, systems-level problem solving, and large-scale automation. At M&T Bank, I engineered a global provisioning framework managing 20,000+ virtual machines across three geo-redundant datacenters--work that demands the same rigor in reliability, performance tuning, and cross-functional collaboration that NVIDIA's AI factory customers expect. I am energized by the opportunity to apply this expertise to NVIDIA's BlueField and ConnectX product lines, where networking performance is the backbone of AI at hyperscale.

My background is rooted in hands-on, low-level engineering. I have diagnosed NUMA topology mismatches to eliminate cross-node latency, automated complex L2-L4 network policies at scale, and built Python middleware with pub/sub queue models for high-throughput orchestration. I thrive in customer-facing roles--translating deep technical knowledge into design-win solutions--and I am self-motivated to master new technologies independently, whether that means ramping on RDMA, DOCA, or DPDK.

A few highlights that align with this role:

- Architected resilient, multi-datacenter infrastructure with strict RTO/RPO compliance, mirroring the reliability demands of hyperscale AI deployments.
- Resolved a production-critical NUMA architecture mismatch, demonstrating hardware-level performance tuning and embedded systems troubleshooting.
- Managed firewall, ACLs, and network security automation across large distributed environments, with deep knowledge of L1-L4 protocols.
- Mentored engineers enterprise-wide on technical governance, Git workflows, and best practices--comfortable representing teams in cross-org and customer discussions.

I would welcome the opportunity to bring my high-performance networking expertise and customer engineering instincts to NVIDIA's Networking Software team. Thank you for your time and consideration.

Best regards,

David Kreuter
