Dear Hiring Manager,

As a Senior Infrastructure Engineer with over a decade of experience, I specialize in building the foundational cloud platforms and developer tools that enable teams to ship faster and more safely. At M&T Bank, I architected GitOps-driven CI/CD pipelines using Terraform, designed a cloud abstraction layer that enabled seamless Azure deployments without changing developer workflows, and built a global provisioning framework managing 20,000+ virtual machines--all with 100% audit compliance. Medallion's mission to eliminate administrative bottlenecks in healthcare resonates deeply with my career-long focus on automating away operational friction.

My day-to-day work sits at the intersection of infrastructure, security, and developer experience. A few highlights that align directly with this role:

- Defined and managed all infrastructure as code using Terraform with pull-request-based plan/apply cycles, ensuring consistent, auditable environments across hybrid cloud.
- Built custom Python middleware and API integrations across ServiceNow, Ansible, Rubrik, VMware, and InfoBlox to enable robust, scalable platform capabilities.
- Designed observability and alerting frameworks using Grafana and service-aware monitoring, reducing MTTR across distributed systems.
- Partnered with security and compliance teams to automate CIS/STIG hardening, firewall policy generation, and zero-trust provisioning into every server build.

Beyond the technical work, I take pride in mentoring engineers and establishing governance standards--Git branching strategies, unit testing practices, and naming conventions--that keep infrastructure code reliable at scale. I also delivered \$400k in cost savings through strategic vendor management and migration automation, a discipline I would bring to Medallion's cloud spend.

I would welcome the opportunity to help Medallion's engineering organization move faster while keeping infrastructure reliable, secure, and scalable. Thank you for your time and consideration.

Best regards,

David Kreuter
