Dear Hiring Manager,

As a Senior Infrastructure and Networking Engineer with more than a decade of experience, I have built, secured, and scaled the networked systems organizations rely on. At M&T Bank, I engineered a global provisioning framework that manages 20,000+ virtual machines across three geo-redundant datacenters--work that demands deep expertise in IP addressing, DNS, VPNs, firewall automation, and distributed-systems resilience. I bring a security-first mindset to every layer of the stack, from automating Check Point firewall rules on day zero to hardening servers against CIS/STIG benchmarks.

What excites me about Tailscale is the opportunity to apply this background to a product I genuinely admire. My career has focused on making complex networking simple and secure--whether building an intelligent IP provisioning engine via Infoblox APIs, architecting redundant DNS infrastructure, or establishing encrypted VPN tunnels for hybrid-cloud connectivity. I thrive on diagnosing intricate networking issues across diverse environments and am energized by the prospect of doing so at the protocol level for a product used by teams of every size.

A few highlights that align directly with this role:

- Built and operated distributed infrastructure across three geo-redundant datacenters with automated failover, observability, and incident-response processes
- Designed API-driven middleware in Python with pub/sub queuing, retry logic, and auto-remediation--experience directly applicable to control-plane and relay-infrastructure work
- Architected SQL-backed DBaaS platforms and have hands-on experience with IP management, NAT, routing, and VPNs at enterprise scale
- Comfortable working asynchronously and mentoring engineers; I set enterprise standards for Git workflows, unit testing, and technical governance at M&T Bank

I would be thrilled to contribute my networking depth and platform-engineering experience to Tailscale's mission. Thank you for your time and consideration.

Best regards,

David Kreuter
