Dear Hiring Manager,

As a Senior Infrastructure Engineer with over a decade of experience building and operating production infrastructure across cloud and on-prem environments, I am excited about the opportunity to help shape how DraftKings scales. At M&T Bank, I have spent the last six years doing exactly what this role demands: crafting Infrastructure as Code with Terraform, developing self-service platforms that empower engineering teams to move fast under strong governance, and leading incident response across a three-datacenter, geo-redundant architecture supporting 20,000+ virtual machines.

My approach is to treat infrastructure as software. I built a custom Python orchestration platform with pub/sub queuing and auto-remediation that serves as the backbone of our provisioning pipeline--bridging ServiceNow, Ansible, and cloud APIs into a single self-service experience. When we expanded to Azure, I designed a cloud-agnostic abstraction layer so teams could deploy without changing their workflows. Observability, networking, and security are baked into every workflow I build, not bolted on after the fact.

A few highlights that align directly with this role:

- Architected GitOps-driven Terraform pipelines with automated plan/apply cycles, standardizing infrastructure changes across hybrid-cloud environments.
- Developed monitoring and alerting frameworks integrated into provisioning workflows, supporting SLO-driven reliability and reducing MTTR.
- Mentored junior engineers and established enterprise-wide standards for Git branching, unit testing, deployment patterns, and configuration best practices.
- Deep, hands-on networking experience, including DNS architecture, firewall automation, packet-level troubleshooting, and distributed network management across 12+ sites.

I thrive in fast-paced, high-growth environments where reliability and velocity must coexist. I would love the chance to bring my platform-engineering mindset to DraftKings and help shape infrastructure that scales as boldly as the product. Thank you for your time and consideration.

Best regards,

David Kreuter
