Dear Hiring Manager,

As a DevOps Engineer with over a decade of experience building scalable, automated infrastructure at M&T Bank, I have dedicated my career to bridging the gap between development velocity and operational excellence. I am writing to express my strong interest in the DevOps Engineer position, where I can apply my expertise in CI/CD automation, Infrastructure as Code, and system observability to drive your engineering team's success.

In my current role, I have championed the adoption of Infrastructure as Code by developing Terraform-driven CI/CD pipelines that standardize deployments and eliminate configuration drift across enterprise environments. I engineered a global provisioning framework managing 20,000+ virtual machines with full API integration across VMware, Rubrik, ServiceNow, and Infoblox--ensuring 100% compliance while reclaiming 1,000+ engineering hours annually. My infrastructure spans three geo-redundant data centers designed for maximum uptime and disaster recovery readiness, directly aligning with your need for high-availability, resilient systems.

My technical background matches your core requirements:

- Cloud & IaC Expertise: Proficient in Terraform, Azure, and automated provisioning workflows that support rapid, repeatable deployments
- CI/CD & Developer Experience: Built scalable pipelines and automation tools that enhance engineering velocity while maintaining strong governance
- Observability & Incident Response: Designed Grafana dashboards and service-aware alerting systems that reduce MTTR through proactive monitoring
- Cost Optimization: Delivered \$400k in licensing savings through intelligent automation and infrastructure optimization

I am excited to bring my passion for automation, system resilience, and developer enablement to your team. Thank you for your consideration.

Best regards,

David Kreuter
