Dear Hiring Manager,

As a Senior Infrastructure Automation Engineer with more than a decade of experience, I have built the very systems Moonlite intends to create: automated network provisioning platforms, security policy enforcement pipelines, and API-driven orchestration frameworks--all operating at scale within a regulated financial environment. The opportunity to apply this foundation to software-defined networking for high-performance AI infrastructure is exactly the challenge I am seeking.

At M&T Bank, I architected a global provisioning framework that manages 20,000+ virtual machines across three geo-redundant datacenters. This work required deep integration with the network at every layer: automating Check Point firewall rule generation and DMZ provisioning for day-zero tenant isolation; building an intelligent IP lifecycle management engine via Infoblox APIs for subnet allocation and routing configuration; and designing Terraform-driven GitOps pipelines for infrastructure-as-code deployment. I built all of this on a custom Python middleware platform that I designed from scratch, bridging ServiceNow and Ansible with pub/sub queuing and auto-remediation logic.

Key achievements relevant to this role:

- Automated network security policy enforcement integrated into provisioning workflows, ensuring isolation and compliance from build time--directly analogous to SDN security groups and VPC policy management.
- Built API-driven network resource lifecycle management (IP allocation, firewall rules, DNS) that eliminated 1,000+ annual engineer hours of manual configuration.
- Delivered these capabilities within a heavily regulated financial institution, maintaining 100% audit compliance--experience directly relevant to Moonlite's enterprise and compliance requirements.
- Designed cloud-agnostic abstraction layers and Terraform pipelines, demonstrating the platform-engineering mindset needed to build programmable networking systems.

I am eager to bring my expertise in network automation, API platform development, and security-first infrastructure design to help build Moonlite's SDN platform. Thank you for your time and consideration.

Best regards, David Kreuter
