Dear Hiring Manager,

As a Senior Platform Engineer with over a decade of experience, I specialize in building developer-first infrastructure platforms that balance autonomy with reliability. At M&T Bank, I architected GitOps-driven CI/CD pipelines using Terraform and refactored legacy automation to be fully cloud-agnostic for Azure--enabling 20,000+ virtual machines to be provisioned through a self-service interface that abstracts infrastructure complexity from developers. My work directly improved developer velocity while maintaining 100% compliance with audit and security requirements.

My approach to platform engineering is rooted in treating infrastructure as software and understanding customer needs. I've led enterprise-wide standards for Git workflows, unit testing, and infrastructure code quality as a primary mentor in M&T's Technology Development Program. I bring deep technical expertise across the full stack--from Terraform and CI/CD pipelines to observability tooling like Grafana, incident response automation, and API-driven integrations.

What excites me most about this role at Quanata is the opportunity to:

- Design self-service platform architectures that empower developers while ensuring security and scalability
- Leverage my GitOps and IaC expertise (Terraform, CI/CD) to build automated deployment processes that enhance DevEx
- Apply my mentorship experience to contribute to developer training, documentation, and fostering a culture of reliability
- Bring cloud infrastructure experience (Azure) and observability tooling knowledge (Grafana) to a mission-driven team

I'm eager to bring my background in financial-grade automation, cloud abstraction, and platform engineering to Quanata's developer experience team. Thank you for your consideration.

Best regards,

David Kreuter
