Infrastructure Automation & Network Platform Engineer

Technical professional with more than 10 years of experience building production-grade orchestration and provisioning systems for enterprise infrastructure. Specializes in designing API-driven middleware, automated lifecycle management workflows, and cloud-agnostic deployment platforms spanning 20,000+ virtual machines. Deep expertise in Python, REST API design, network architecture (BGP, DNS, F5, VPN), and infrastructure-as-code with Terraform and Ansible. Proven track record of architecting multi-tenant provisioning systems with full network isolation, security hardening to CIS/STIG standards, and end-to-end automation from deployment through decommissioning -- all within a highly regulated financial services environment.

WORK EXPERIENCE

M&T Bank

03/2019 - Present

Automation Engineer (formerly Systems Engineer)

- **Platform Engineering & Middleware:** Designed and developed a custom Python orchestration application that serves as middleware between ServiceNow and Ansible Automation Platform; implemented advanced retry logic, auto-remediation of deployment failures, and a future-ready pub/sub queue model for high-volume network and infrastructure provisioning at scale.
- **Network Provisioning & Lifecycle Management:** Developed a zero-touch build workflow that automates end-to-end server provisioning, including network configuration, agent installation, drive formatting, and security hardening for Linux (Ansible) and Windows (GPO) -- managing the full resource lifecycle from deployment through decommissioning.
- **Cloud Abstraction & Redesign:** Refactored legacy on-premises automation workflows to be fully cloud-agnostic using Terraform and infrastructure-as-code patterns, enabling seamless deployment to Azure while abstracting the underlying infrastructure provider behind a consistent programmatic API.
- **Database as a Service (DBaaS):** Collaborated with Database Engineering to architect a high-performance on-premises SQL cluster with automated provisioning, enabling a unified DBaaS offering that consolidated fragmented legacy infrastructure and streamlined multi-tenant application delivery.
- **Technical Leadership:** Serve as a primary mentor for the Technology Development Program (TDP), setting enterprise-wide standards for Git branching strategies, unit testing for infrastructure code, and governance practices aligned with regulated-industry compliance requirements.

OTG Management

07/2013 - 02/2019

Lead Network Engineer

- **Performance Engineering:** Diagnosed and resolved a mission-critical server performance bottleneck by identifying a NUMA architecture mismatch; realigned vCPU/memory topology to eliminate cross-node latency -- demonstrating deep Linux systems and low-latency troubleshooting expertise applicable to high-performance computing environments.
- **Enterprise Mobility & Network Security:** Orchestrated the management of 15,000 devices via Meraki MDM, implementing automated security protocols including geofencing, remote wipe triggers, and policy enforcement across a distributed network infrastructure.

SKILLS

Languages: Python, Bash, YAML, SQL, PowerShell, Javascript

Automation/Orchestration: Terraform, REST API, Middleware Development, Ansible Automation Platform, CI/CD Pipelines, GitOps, Self-Healing Infrastructure, Unit Testing

Infrastructure: Azure Cloud Services, OS Hardening (CIS/STIG), VMware vSphere, Nutanix AHV, DBaaS, NUMA Tuning, Check Point Firewalls, Group Policy Objects (GPO), Active Directory

Networking: BGP, DNS, F5 Load Balancing, High Availability, VPN, Intrusion Detection, Meraki MDM

EDUCATION

Bachelor Of Science in Computer Information Systems

12/2012

SUNY Fredonia
