Dear Hiring Manager,

As a Senior Automation Engineer with over a decade of experience managing enterprise Linux and Windows systems, I have dedicated my career to building scalable, secure infrastructure through code-driven automation. I am writing to express my strong interest in the Senior Systems Engineer position at Dragos, where I can apply my expertise in Terraform, Ansible, and CI/CD pipelines to support your critical ICS/OT cybersecurity mission.

In my current role at M&T Bank, I have championed Infrastructure as Code by engineering a global provisioning framework that manages 20,000+ virtual machines across VMware vSphere environments. I developed scalable CI/CD pipelines using Terraform to eliminate configuration drift and ensure consistent, auditable deployments. My work spans the full system lifecycle--from automated image creation and patching to decommissioning--all while maintaining strict compliance with financial regulatory standards. I have also architected highly resilient, geo-redundant datacenter infrastructure and implemented intelligent automation that reclaimed 1,000+ engineering hours annually.

My technical background directly aligns with your requirements:

- Advanced automation with Ansible, Terraform, and PowerShell/Python/Bash scripting across Linux and Windows environments
- Deep VMware vSphere/vCenter expertise with additional Nutanix AHV experience in production enterprise settings
- Hands-on CI/CD pipeline design and API-driven orchestration across ServiceNow, Infoblox, and Rubrik platforms
- Strong networking foundation including firewalls, VPNs, DNS architecture, and Active Directory/identity management

I am eager to bring my passion for automation, security, and operational excellence to Dragos's mission-critical development infrastructure. Thank you for your consideration.

Best regards,

David Kreuter
